

## The World Leader for a Reason.

If you are considering building a studio for chroma key / virtual set production, look no further than Pro Cyc. Over the past 30 years Pro Cyc has built a reputation within the broadcast, television, film and video production industries as the go-to solution for seamless background, a.k.a. "cyclorama" studios. With thousands of satisfied clients worldwide, Pro Cyc's commitment to customer service and satisfaction, and to offering the best designs and materials has made us the choice of some of the most recognized companies in the world. And because of the modular nature of every Pro Cyc system, we can customize a solution to fit virtually any size studio space and budget.

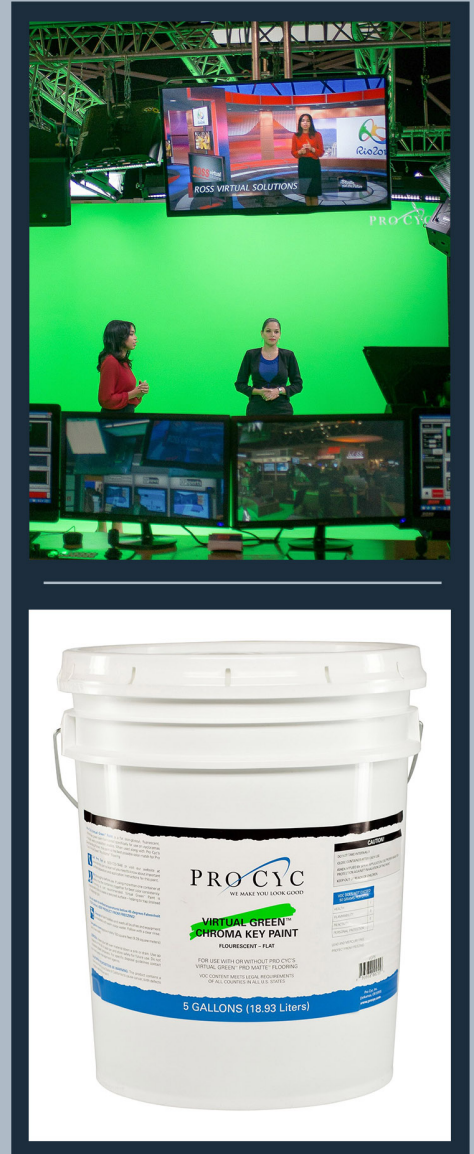

## Why choose Pro Cyc for your studio?

- ◆ 30 years of experience working with thousands of clients of all sizes and budgets has made us the most experienced cyclorama company in the world.
- ◆ We work personally with each customer to make sure they are getting the best studio system for their needs and budget.
- ◆ Pro Cyc's modular cove designs ensure the most seamless studio finish possible, enabling you to get the best results from your virtual set equipment.
- ◆ We offer both **Freestanding** systems (the studio can be built anywhere without any supporting walls or hardware) and **Built-in** systems (our modular coves are built in to your existing Sheetrock walls).
- ◆ We offer systems with a wide variety of cove radiuses, including 18, 30, 42, and 60 inch coves, and can accommodate virtually any studio design requirement.

## The Patented Pro Cyc Corner

- ◆ Pro Cyc's **patented corner design** (which no other company can replicate) includes the use of different horizontal and vertical radiuses in the corners of the studio. The advantages of this unique design are many, including:
  - ◆ **Better sound** inside your studio and the elimination of "parabolic" sound reflectance in the corners
  - ◆ **Better lighting**, especially in the corners which helps reduce green spill on the talent
  - ◆ It enables the utilization of Pro Cyc's **expanded corner** configurations which have both of the above benefits as well as several others
- ◆ Pro Cyc's Virtual Green™ Chroma Key Paint, and Pro Matte™ Flooring are both premium quality products that can be used together to create a seamless green screen studio environment.
